

Get the support you need to implement or increase your physical activity and other lifestyle changes that support improved nutrition, improved sleep, better stress management and prevention and/or management of chronic diseases.

It starts with one small change...

Why Exercise is Important:

- Improves your mood and sleep.
- Lowers your risk of heart problems, high blood pressure, Type 2 diabetes and many kinds of cancer.
- Helps maintain your immune system, which may help to lower risk of infection, lessen symptoms and speed recovery from various illnesses.
- Improves cognition and mental health.

Additionally...

Small lifestyle changes, when practiced consistently, increase self-efficacy and sustainability of healthy lifestyle behaviors.

it's doable.*

Finding the Right Fit: Are you...

- ✓ **NOT** meeting the recommended amount of physical activity of 150 min a week, **AND**
- ✓ Your healthcare provider has identified preventable lifestyle risk factors that put you at an increased risk for chronic disease such as Type 2 Diabetes, cardiovascular disease or obesity? **OR**
- ✓ Have you been diagnosed with a chronic disease or obesity (a BMI of 30 or above)?
